2018 FCC Form 499-A/Q True Up

1. The first step in the True-Up is to determine whether or not the company is *de minimis* for purposes of the A/Q True Up using the following formula:
$$(499A * .175000) - (499A * .175000 * .149488).$$
 - a. If the result is $< \$10,000$, then the contributor is *de minimis* and any support mechanism charges billed to the filer ID for their four 499Q filings for 2017 are reversed.
 - b. If the result is $\geq \$10,000$, then the contributor is NOT *de minimis*; continue to step 2.
2. The next step in the True Up is determining which FCC Contribution Factor and associated FCC Circularity Factor to use in the True-Up Calculation. After determining which factor is applicable, it will be used to replace the "Average FCC Contribution Factor" in step 3.
 - a. Average of 2 highest FCC Contribution Factors and the associated average FCC Circularity Factor should be used if $(499A) > (Q1 + Q2 + Q3 + Q4)$.
 - b. Average of 2 lowest FCC Contribution Factors and the associated average FCC Circularity Factor should be used if $(499A) < (Q1 + Q2 + Q3 + Q4)$.
 - c. Average of all 4 FCC Contribution Factors and the associated average FCC Circularity Factor should be used if $(499A) = (Q1 + Q2 + Q3 + Q4)$.
3. Using the inputs noted above, the A/Q True Up formula for calculating necessary Support Mechanism Credits or Adjustments is:
 - a. $(499A) - (Q1 + Q2 + Q3 + Q4) = \text{True Up Base}$
 - b. $(\text{True Up Base} * \text{Average FCC Contribution Factor}) - (\text{True Up Base} * \text{Average FCC Contribution Factor} * \text{Average FCC Circularity Factor}) = \text{Quarterly Credit or Adjustment}$
 - c. $\text{Quarterly Credit or Adjustment} / 3 = \text{Monthly Credit or Adjustment}$
